SYLTON[®]

The desire for beautification and rejuvenation is universal, yet solutions are individual

Skin is the main element people see when they look at a person's face. That is why skin problems and signs of aging are reasons to seek treatment. Observ 520x determines these skin conditions in the blink of an eye. Understanding your client's skin quality and goal is the starting point of each personal treatment plan. Observ 520x helps you make more informed decisions when choosing treatment plans and selecting the right products for your patients.

The most powerful skin consultation tool

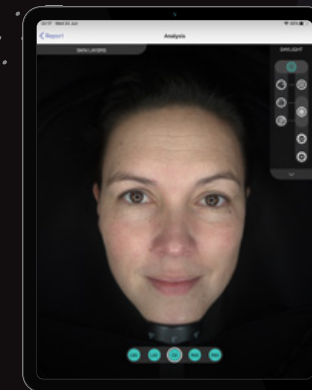

Make sure a thorough skin analysis is part of your consultation process. Observ 520x enables cosmetic clinics to capture characteristics in different layers of the skin to clearly diagnose and solve your clients specific beauty concerns. Whether you are an aesthetician or a cosmetic dermatologist: Observ 520x always fit your needs.

Attract, convert and retain more patients with Observ 520x

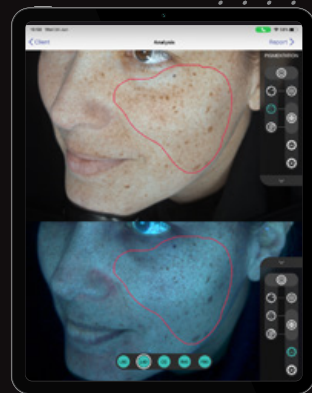

Create an efficient workflow for faster consultations than ever before

Available on the iPad Pro with an intuitive app that adapts to your clinics workflow, from intake to result documentation

Understanding skin conditions beneath the skin and before they are visible, empowers you to truly get results for your patients.

Use all possible angles and compare modes to identify skin aging and concerns and mark potential treatment areas. Show patients their skin concerns in a way they are not able to with their own eyes

Visualisation is key for an efficient consultation flow

Professionalise your patient consultations and stand out against the competition by introducing skin diagnostics into your practice. The Observ 520x optimises your clinical workflow: from intake up to and including the documentation of results.

Add your own treatments, products and brands to the Observ app to grow your sales. Share reports and images with patients, peers and staff. Distinguish yourself from the competition with extensive skin analysis. Building a personalised and effective treatment plan becomes way more effective and visualise by visualising your expertise on skin treatments. Wow patients by showing them what is beneath the skin surface.

Track and document aesthetic results

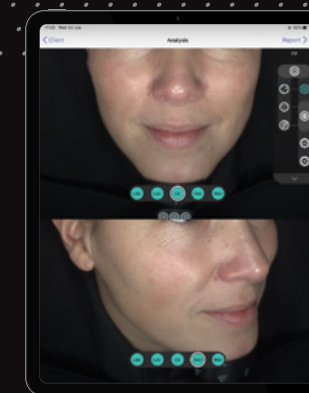

In the world of today, non-surgical aesthetic treatments, such as injectables, chemical peelings, dermabrasion and laser resurfacing treatments, have increased substantially in popularity, and are accessible to just about anyone. The results of aesthetic treatments can be subtle and individual results may vary. By photo documenting your clients' data with Observe 520x, practitioners can enhance the effectiveness of cosmetic treatments.

If you can exceed your clients' expectations, you turn 'treatment clients' into 'loyal clients'

Turn aesthetic consultations into engaged customer experiences

Create digital patient reports, care & treatment plans, side-by-side comparisons, tailored skincare regimens and more. Easy access to all patient data in the cloud

Base expert advice on high quality before and after images

Observ 520x is a powerful tool that affirms the trusted value of your aesthetic team and elevates effective treatments. Showcase before and after images to illustrate and promote your aesthetic treatments and unrivalled client services.

Picture Perfect Positioning System

To capture perfect images, reproducible positioning is essential. The ergonomic chinrest can be adjusted to 5 angles; the app will automatically detect the chosen angle. Observ 520x is equipped with a patented Face Positioning System (FPS), which will facilitate the positioning of your client via visual feedback technology.

Observ 520x works fast and smooth

Observ 520x captures images in less than 10 seconds and has the best-in-class image positioning. The controlled face positioning system and the controlled illumination guarantees outstanding high quality images. With the ghosting overlay, recreating the positioning of earlier sessions is effortless.

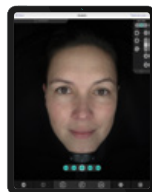

Bring the inner beauty out

How we look is important. There are many skin issues that can cause a person to feel insecure whether this has to do with apparent skin problems like acne or with aging skin issues such as wrinkles.

Thanks to you and a little help from the Observ 520x you can wow patients and show them what is beneath the skin to build an effective treatment. Even the most subtle signs of aging are captured.

Get insights on skin concerns that emerge deep within the skin. Spot volume loss and changes in the contours of the face, allowing you to make more informed decisions on required treatments and products.

Advise on pre- and post-treatment products and increase your sales

The starting point of your consultation is daylight mode. This provides a clear means for the overall appearance evaluation of the skin and the baseline of aesthetic skin consultations.

Focused on your area of expertise

SKIN DIAGNOSIS

Look at the root causes of predominant skin concerns and help patients decide on the most beneficial treatments

Let's look into *skin*

APPEARANCE ANALYSIS

Distinguish between the different optical interactions of skin components to counteract surface changes of the skin

Let's look into *face*

AESTHETIC ANALYSIS

Analyse all signs of facial aging, from volume changes to appearing pigment and consult patients on the best non-invasive treatments

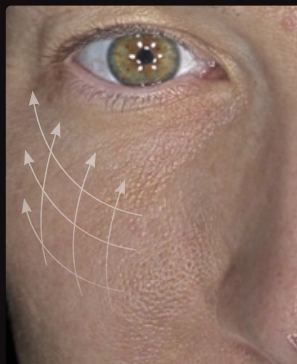

Let's look into *face*

Let's look into *face*

Wrinkles & Lines

Volume & Lifting

Facial Contouring

Skin Improvement

AESTHETIC ANALYSIS

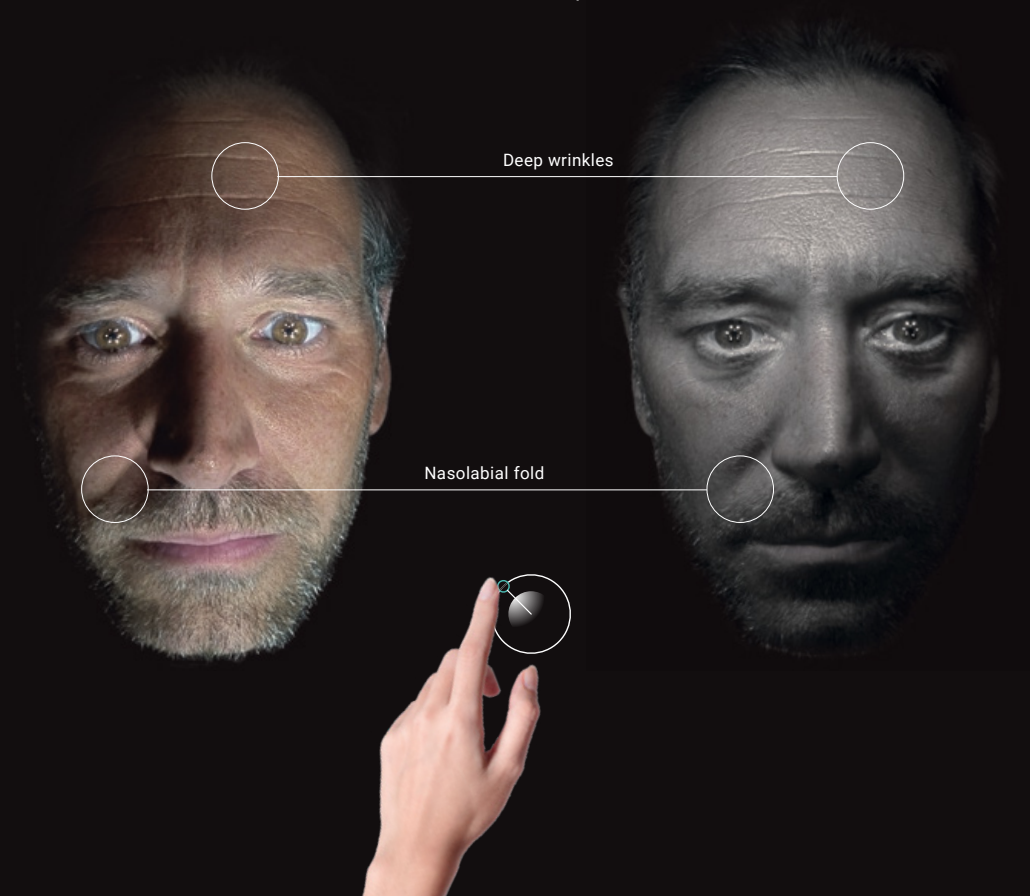

Bringing out the True You

When we age, different processes take place within the different layers of the skin. We lose enzymes, fibres, tissue, fat and with that volume. On the other hand our skin becomes more translucent and underlying vascular issues and pigmentation becomes more prominent.

With Observ 520x, you can diagnose all these skin conditions with ease within minutes and decide on the right treatment. Capture, document and share the journey, even with peers, to form a patient to a happy customer.

Let's look into *face - volume and shape*

AESTHETIC ANALYSIS

Show patients even more than they can see

Helping your client visualize their skin concerns is a great way to advise them the best treatments. Whether you focus on wrinkles, fine lines or volume loss, the Observ 520x is the new way to look at skin.

With the advanced 360 Light Technology we bring you a better way to show the effects of volume treatments with high quality before and after pictures. The easy to control dynamic wheel will give you full control over your point of light so you can use shadows to show where on your clients skin, treatments may be most effective.

The facial topography is clearly revealed in the Grey Technology and shows you exactly where volume treatments are needed to get those coveted rejuvenating effects. Use changes in shading and shadows that occur after treatments to confirm effectiveness.

Let's look into *face - facial balance*

 Facial thirds

 Facial fifths

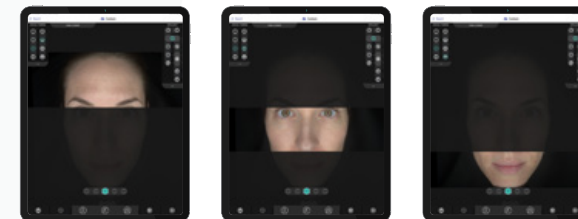

AESTHETIC ANALYSIS

It's all about the balance

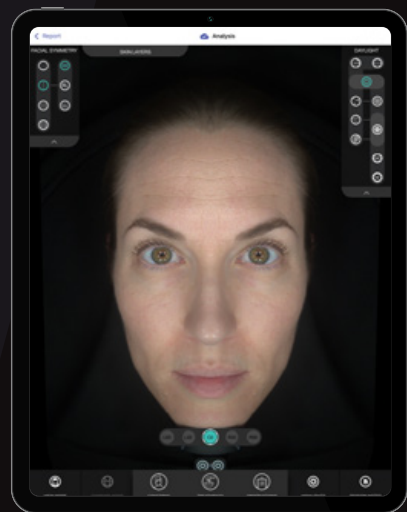

By treating one specific area of the face, all other facial proportions will be affected as well. Observ 520x's Aesthetic Analysis has got you covered as it provides you the possibility to analyse facial symmetry and attractiveness based on the rules of thirds and fifths to get the most compelling treatment results.

With aging, the harmony of the face changes as well. The lower third becomes wider with the sagging of malar fat pads while the outer fifths become narrower as the temples retract. Using the facial fifths and thirds will help immensely in determining the counteracting aesthetic treatments and recommending these to your patients.

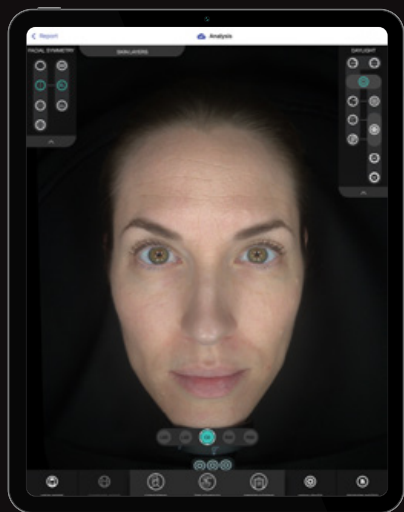

This very handy feature added to the Observ 520x app will surely help you in converting your patients as you can show them per facial third how you can improve different facial aging elements like wrinkles, lines, pigmentation spots and sagging fat.

Let's look into *face - facial symmetry*

RR

RL

LL

AESTHETIC ANALYSIS

Which side are you on?

The more symmetrical the face is, the more attractive it is perceived. While analysing the facial features, it is very important to establish which side of the face is the most attractive side and will be the reference point for aesthetic treatments. By mirroring both left or right halves of the face. Observ 520x's Facial Harmony functionality, which is part of the Aesthetic Analysis, integrates facial symmetry and the rules of thirds & fifths seamlessly into the consultation workflow.

“Beauty is rather a light that
plays over the symmetry of things
than that symmetry itself.”

Plotinus

Facial symmetry

Let's look into *face - appearance*

Surface Texture is the skin's' topography

Pigmentation is responsible for skin tone and colour

Vascularity is a network of microvascular structures

APPEARANCE ANALYSIS

Reveal perfect skin

Observe 520x reveals how subtle signs of ageing and skin health contribute to appearance. This visible feedback enables aesthetic practitioners to understand the skin of their clients and provide individual, comprehensive care and treatments.

“One of the important steps in a consultation is, without a doubt, the skin diagnosis. I find it essential to study the patients skin, using the Observe to get high quality images. The multiple light modes allows me to conduct a profound skin analysis. Patients are happy with their treatment results. I am also able to develop better work protocols as the Observe helps me gain more insights with its accurate analysis.”

Melasma/Chloasma

Scarring

Acne

SKIN DIAGNOSIS

Look deep into the skin layers

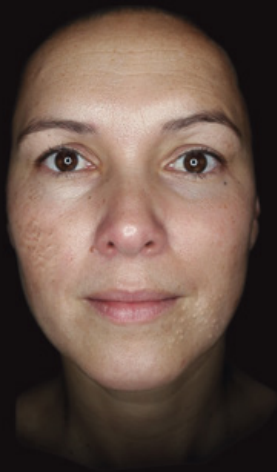

Observ 520x is a powerful tool for comprehensive skin assessment to help your patients achieve their goal of a healthy skin, both inside and out. As an aesthetic professional, you recognize many skin issues immediately during the first evaluation, based on your educational background. You then want to show your patient what's going on and how your treatments will help.

“Observ’s imaging of the skin is so comprehensive and easy to understand. Patients like to see their skin change during treatment. It helps to motivate them to follow all doctor’s recommendations.”

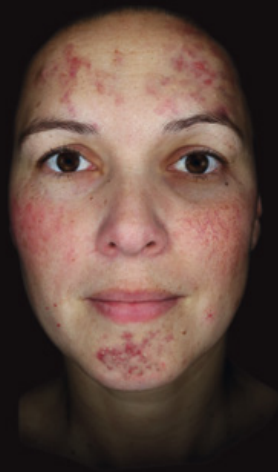

Dr. Tina Meder Meder Beauty Science

SKIN DIAGNOSIS

Skin Therapy

From surface layers to below, Observ 520x reveals how subtle signs of ageing and skin health contribute to appearance. This visible information enables aesthetic practitioners to understand the skin of their clients and provide individual, comprehensive care and treatments.

Build the confidence of your patients
who experience severe issues and
use your skills to achieve results far more
meaningful than beauty.

If your clinic branches out, we grow along with you

If you change the way you work, Observ changes with you. When your clinic branches out and your treatments and product portfolio expands, Observ always fits your needs. Observ 520x is available in two configurations so choose the one that fits you best. You can even upgrade your skin analysis system later on with the Aesthetic Analysis Extension Kit.

Skin Diagnosis + Appearance analysis

Skin Diagnosis + Aesthetic analysis

Aesthetic Analysis Extension

Visualisation is King. The intricacies
of your treatments can be difficult
for patients to understand, but
when you show them the visual
evidence of the results they will see
their value instantaneously.

The Observ experience

The Observ 520x is made with today's aesthetic and cosmetic practitioners in mind. It is part of the Observ-family of skin diagnosis devices. Head-quartered in Europe, Sylton develops and produces diagnostic equipment for the global beauty industry. Over 25 years of experience and developed in partnership with many cosmetic multinationals and skin care brands, Sylton provides you state-of-the art diagnostic products that help your business grow.

Sylton Connect

With Sylton Connect we strive to make working with our Observ system more easy and secure. Sylton Connect is a collection of digital services where you can store and retrieve your client and treatment information. Whether you are a small clinic or have a branch of beauty institutes, connecting your Observ data with your colleagues and clients has never been this easy.

Accessories

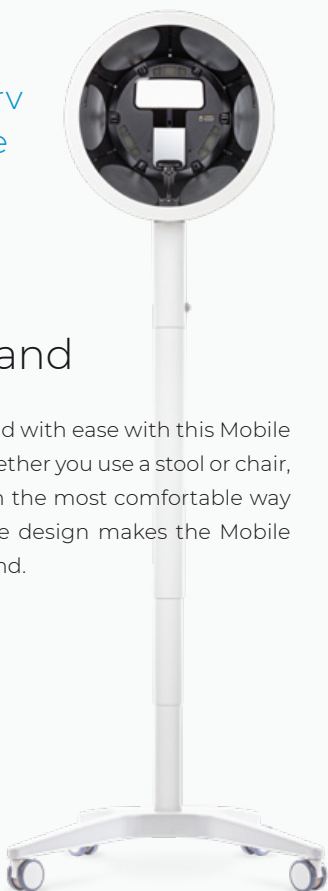

Observ 520x fits anywhere and goes everywhere with our Mobile Stand and Headband and Cape.

Wheel your Observ
around the office

Observ Mobile Stand

Move your Observ 320 or 520x around with ease with this Mobile Stand. The height is adjustable so whether you use a stool or chair, you can always position the Observ in the most comfortable way for you and your client. The innovative design makes the Mobile Stand safe and easy to use with one hand.

- ✓ Height Adjustable
- ✓ 4 swivel wheels
- ✓ Cord storage system

Observ Headband & Cape

The light reflections within the Observ work best if there are no reflections coming from bleached hair or light leaks from outside. To minimize this, we developed a headband and cape you can use if your client has white, grey or bleached hair. The cape is ideal when your client wears a white shirt so you always get the right images in one go, even when the light shade is not applied correctly and there is a lot of extra light coming from your surroundings.

- ✓ Soft headband with velcro
- ✓ Neck and shoulder covering cape
- ✓ Both can be washed with ease

Bring out the best
in each picture
